                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT
                 TASKI (see AAY79674). TASK2 is a unique pot assium transport channel that is regulated by external pH, and is probability expressed in kidney and epithelial tissues. The invention relates to: identification of the native renal channel. In the properties of TASK2; identification of potent pharmacology that specifically modulates the activity of the TASK-2 channel; localizing K+ channels comprising the TASK2 subunit in viv; and the generation of mice in which the TASK2 gene has been in jointeed. The invention
                                                                                                                     The present sequence is that of human TASK2 (TWIK-related acid-sensitive potassium channel 2), a novel member of the 2P domain potassium channel family that also includes WIK-1 (see AAY79673) and
                                                                                                                                                                                                New nucleic acid encoding a non-inactivating outwardly rectifying potassium transport channel, designated TASK: useful in the treatment of hypertension or dysfunctions of the kidner. Liver or pancreas -
                                                                                                                                                                                                                                                          N-PSDB;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                   e.g. central nervous system disorders (e.g. Alzheimer's disease, dementia, Parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis, progressive supranuclear palsy, epilepsy, Creutzfeldt-Jacob disease), psychiatric disorders (e.g. depression, schizophrenic disorders, Korsakoff's psychosis, mania, anxiety disorders or phobic disorders), learning or memory disorders (e.g. amnesia or age-related memory loss), neurological disorders (e.g. migraine), obesity, and cardiac disorders. The nucleic acids, proteins, protein homologues and antibodies against them may be further used in screening assays, predictive medicine. The nucleic acids can be inserted into vectors and used as gene therapy vectors, to express TWIK protein, to detect TWIK mRNA, modulate TWIK activity, and screen for drugs or compounds that modulate TWIK activity. Host cells may be used to produce non-human
                                                                                                                                                                                                                                                                                                                       This sequence represents the human TWIK-3 protein of the invention. The TWIK-2 (Tandem of P domains in a Weak Inward rectifying potassium (K+) channel-2), TWIK-3 and TWIK-4 nucleic acids and proteins are useful as targets for developing modulating agents to regulate a variety of cellular processes. They may be useful for developing novel diagnostic and therapeutic agents for potassium channel associated disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New tandem of P domains in a weak inward rectifying potassium channel proteins and genes for e.g. developing therapeutic agents for potassium channel associated disorders, e.g. central nervous system, psychiatric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; TWIK-3; TWIK-4; TWIK-2; central nervous system disorder; dementia; Trandem of p domains in a Weak Inward rectifying K+ channel; epilepsy; Alzheimer's disease; Parkinson's disease; multiple sclerosis; depression; amyotrophic lateral sclerosis; progressive supranuclear palsy; mania; creutzfeldt-Jacob disease; psychiatric disorder; schizophrenic disorder; Korsakoff's psychosis; anxiety disorder; phobic disorder; amnesia; learning disorder; memory disorder; age-related memory loss; obesity;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (K+) (TWIK) polypeptide. The specification describes TWIK2, TWIK3, TWIK TWIK5, TWIK6, TWIK7, and TWIK1. The TWIK channel nucleic acids and proteins are used in screening assays to identify candidate compounds which are potential pesticides or therapeutics. The TWIK channel nuclei acids can be used for generating mutant phenotypes in animal models or in living cells that can be used to study the ion channels, their regulation, and their use as pesticide or drug targets, and as hybridisation probes and replication/amplification primers. TWIK channel proteins are useful as immunogens to generate monoclonal or than the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polyclonal antibodies, and in assays to identify molecules that would specifically bind to them. Genetically engineered metazoan invertebrate animals may be used in studying TWIK channel activity, and for screening and identifying new drug targets, therapeutic agents, diagnostics and prognosis useful in treating disorders associated with ion channels.

The cDNA and the vectors can also be used to create transgenic animals (especially knock-out animals) for use as models of TWIK-1 related diseases. Analysis of the sequence of the TWIK-1 gene may be used for pre-natal diagnosis of disease. Antibodies can be used to detect TWIK-1 channels and for inhibiting or activating the channels in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a protein califrising a potassium chann with the properties of a TWIK (Trandem of p.3. mains in a Weak Inward rectlifying K+)-1 channel. This is the first represent of a new family of channels consisting of 4 transmembrane segments and two p domains, and being only weakly rectlifying. The cDNA, vectors, the cells expressing TWIK-1 type channels and the protein are used to compensate for deficiency of potassium channels in various tissues. Compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acid encoding new potassium channel disignated TWIK-1 - useful for treating channel deficiency diseates, screening for active agents and for diagnosis

 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                      DB

The polynucleotide sequence of h-TREK1 can be used to diagnose a disease or susceptibility to a disease related to expression or activity of h-TREK-1 polypeptides. The methods of diagnosis may be used in the treatment of diseases including cancer, pulmonary, cardiovascular, and inflammatory diseases, pain, psychiatric disorders including depression and schizophrenia, neurodegenerative diseases including Alzheimer's, stroke, and head trauma and neurological disorders including migraine.

This sequence represents the human K+Hnov59 go ssium channel.

CK HHnov proteins have a high degree of homology to known potassium channels and may be alpha subunits, which form the functional channel, or accessory subunits that act to modulate the channel activity. K+Hnov59 is a 4 transmembrane domain, 2 pore domain potassium channel. The gene coil calisation using primers Azzl1939 and Azzl1940, K+Hnov DNAs covere isolated by extension of expressed sequence tags (ESTs) which were concluded by extension of expressed sequence tags (ESTs) which were concluded but not identical to known human potassium channels. Potential polymorphisms detected as sequence variants between multiple coil types and biochemical pathways. Defective potassium channels are coil types and biochemical pathways. Defective potassium channels are cardiac arrhythmia (long QT syndrome); epilopsy: and Bartter's syndrome. Coil tis likely that abnormal potassium channels or also implicated in certain renal, cardiovascular and central nervous system (CNS) coidentifying homologous or related proteins and the DNA sequences encoding them. They may be used to produce compositions that modulate the coinchemical pathways associated with it. They may also be used for the treatment of diseases associated with abnormal potassium channels for the treatment of diseases associated with abnormal potassium channels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim

The polypuroleotide sequence of h-TREK1 can be used to diagnose a disease or susceptibility to a disease related to expression or activity of h-TREK-1 polypeptides. The methods of diagnosis may be used in the treatment of diseases including cancer, pulmonary, cardiovascular, and inflammatory diseases, pain, psychiatric disorders including depression and schizophrenia, neurodegenerative diseases including Alzheimer's,

                                 The present sequence is human TREK1 (h-TREY). h-TREK1 is a member of the 2P domain potassium channel family of prote. hich play a part in the control of resting membrane potential. Modular on of these channels will therefore affect neuronal excitability, thereby leading to a modulation of neurotransmitter release and activity of neuronal networks. Such modulation therefore may be useful for the treatment of certain neurological conditions such as epilepsy, sic exclated disorders, cognitive dysfunction, attention deficit diso war, addiction, anxiety/phobia, Parkinson's and Huntington's curea, cerebral palsy,

The present sequence represents a mechanically sensitive potassium channel protein designated TREK-1. The protein is activated by polyunsaturated fatty acids, particularly arachidonic acid, and by riluzole. The protein is used to screen for specific modulators which are useful for treating or preventing diseases of the heart and nervous systems in humans and animals, e.g. epilepsy, cardiovascular disease (arrhythmia), neurodegeneration (particularly where associated with

The h-TRAAK polypeptides and polynucleotides may be used in diagnostic assays for conditions related to h-TRAAK polypeptides. The h-TRAAK polypeptides and antagonists of h-TRAAK polypeptides. The h-TRAAK polypeptides and polynucleotides may also be useful for treatment and prevention (e.g. as vaccines) of certain diseases, such as pain, psychiatric disorders including depression and schizophrenia, neurodegenerative disease including Alzheimer's, stroke and head trauma and neurological disorders including migraine and epilepsy. The present sequence is human h-TRAAK protein #1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a mechanically sensitive potassium channel protein designated TRAAK. The protein is activated by polyunsaturated fatty acids, particularly arachidonic acid, and by riluzole. The protein is used to screen for specific modulators which are useful for treating or preventing diseases of the heart and nervous systems in humans and animals, e.g. epilepsy, cardiovascular disease (arrhythmia), neurodegeneration (particularly where associated with ischemia or anoxia), abnormalities of hormone secretion and muscular disease. The protein itself may be used to treat these diseases. Antibodies specific for the protein are used to detect it in tissues, also as the protein are used to detect it in tissues.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polynucleotide AAZ00041. AAZ00039 and ĀĀY28490 re complete h-TREK1 polynucleotide and polypeptide sequences. h-10001 is a two pore potassium channel, and the gene maps to human romosome 1932, between the markers D1S237 and WIS105. The polynucleo' is sequence of h-TREK1 can be used to diagnose a disease or susceptibility to a disease related to expression or activity of h-TREK-1 polypeptide. The methods of diagnosis may be used in the treatment of diseases including cancer, pulmonary, may be used in the treatment of diseases including cancer, pulmonary,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence is a partial h-TREK1 polypeptive polynucleotide AAZ00041.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TWIK-2 (Tandem of P domains in a Weak Inward rectifying potassium (K+) channel-2), TWIK-3 and TWIK-4 nucleic acids and proteins are useful as targets for developing modulating agents to regulate a variety of cellular processes. They may be useful for developing novel diagnostic and therapeutic agents for potassium channel associated disorders, e.g. central nervous system disorders (e.g. Alzheimer's disease, dementia, parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis, progressive supranuclear palsy, epilepsy, Creutzfeldt-Jacob
